PROJECTS

PG Nest App

Build this PG Nest App for helping students to book and search PG and Hostels including features such as property listings, payment gateway integration .It gives user a relaxing process of searching accommodation for themselves. My role is to design the UI of the app using XML .It is for mobile users.

Status : Completed

Tools Used : Android Studio, Firebase, Razorpay API

PG Nest Website

This Project is the extension of the above project with additional features in website version for web users. It include local services which are necessary for a student such as grocery store, stationary shop, canteen, study tutorials .It is a development and deployment project .It will be deployed on AWS and it gives student a way to get necessary things with a good accommodation.

Status : In Progress

Tools Used : HTML, Javascript, Tailwind CSS, React, MongoDB, AWS .
